

**Cyclos: Revolution, an Action/Arcade game designed to overcome the limitations of touch devices, now [available on Google Play](#) by Psyflex Interactions.**

Athens, Greece - July 20th, 2015

Cyclos offers console-like action in a touch-friendly manner. This is achieved by a single-tap input system that takes advantage of the character's circular motion, allowing a fast, reflex-based gameplay in a true 2D setting, without resorting to on-screen buttons and joysticks.

Cyclos is an Action/Arcade game where simple rules give rise to complex and lifelike behaviour. Game events are half-scripted, half-procedural, which secures a solid scoring system, while increasing replayability. It employs a simple monetization model, offering a number of free game modes and a single purchase that unlocks the full game and all future updates. Every game mode is a game on its own. Additional modes are under development and will be released in upcoming updates.

Psyflex Interactions is an independent game development studio based on Athens, Greece. Its mission is to create innovative games by researching new potential game mechanics.
